

**No.1 lug & concentric butterfly valve**  
 Black ring is seat, integral lined body so that body didn't touch any fluid.  
 You can choose any materials of body  
 This cost is cheaper.

**Note:**

No.2 & No.3 are double offset disc, so the body touch fluid. No.1 is concentric, the body doesn't touch fluid.

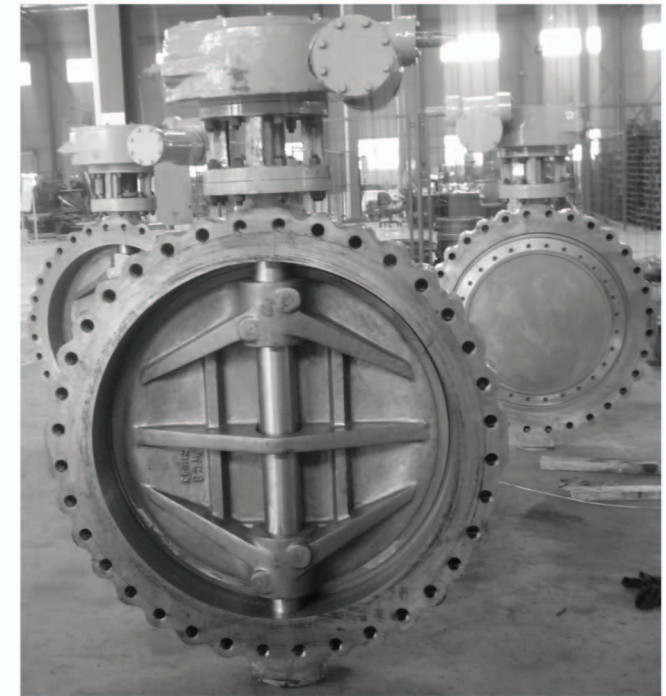

No.2 sample is wafer samplly, it's nothing, we can supply lug valves as No.2.

No.3 is larger size performance valve.

Face to face of above three kinds of vavle is same. It is according to EN558.End flange is according to ANSI125/150.

**No.2 double eccentric butterfly valve**  
 White ring is PTFE sealing, this valve body must touch fluid, and the performance of sealing is not very good compare with NO.1

**No.3 high performance & double eccentric butterfly valve**  
 This valve is disc sealing, more expensive than NO.1 & No.2
